How Does Your Garden Grow?

Garden Guide

*Written and Illustrated by Mrs. Coffin's
Kindergarten Class
Spring 2008*

*This garden guide is a culminating project which represents our learning over an
8 week expedition called "How Does Your Garden Grow?". We used
information gathered from experts, experiences and books to create this resource
for others to use.*

*East End Community School
195 North Street
Portland, Maine*

Page

1-5 Prepare the Soil

7-11 Planting

13-19 Care

21-27 Garden Helpers

prepare the
soil

PICK a place with
sun

because plants need
sun to grow.

Hanad

2

Dig up and turn the
soil

because roots need
loose soil to grow.

Sam

3

Take out the rocks

because roots need
space to grow

Add compost and nutrients

because plants need food to
grow strong.

Planting

Dig a hole

because the plant
needs soil to protect it.

8

Richard

Plant a seed

because it will
grow into a
plant.

9

Shawn

Plant a seedling

because they will have
a head start.

Aliya

10

Don't plant seedlings
too close together

because they need
space to grow.

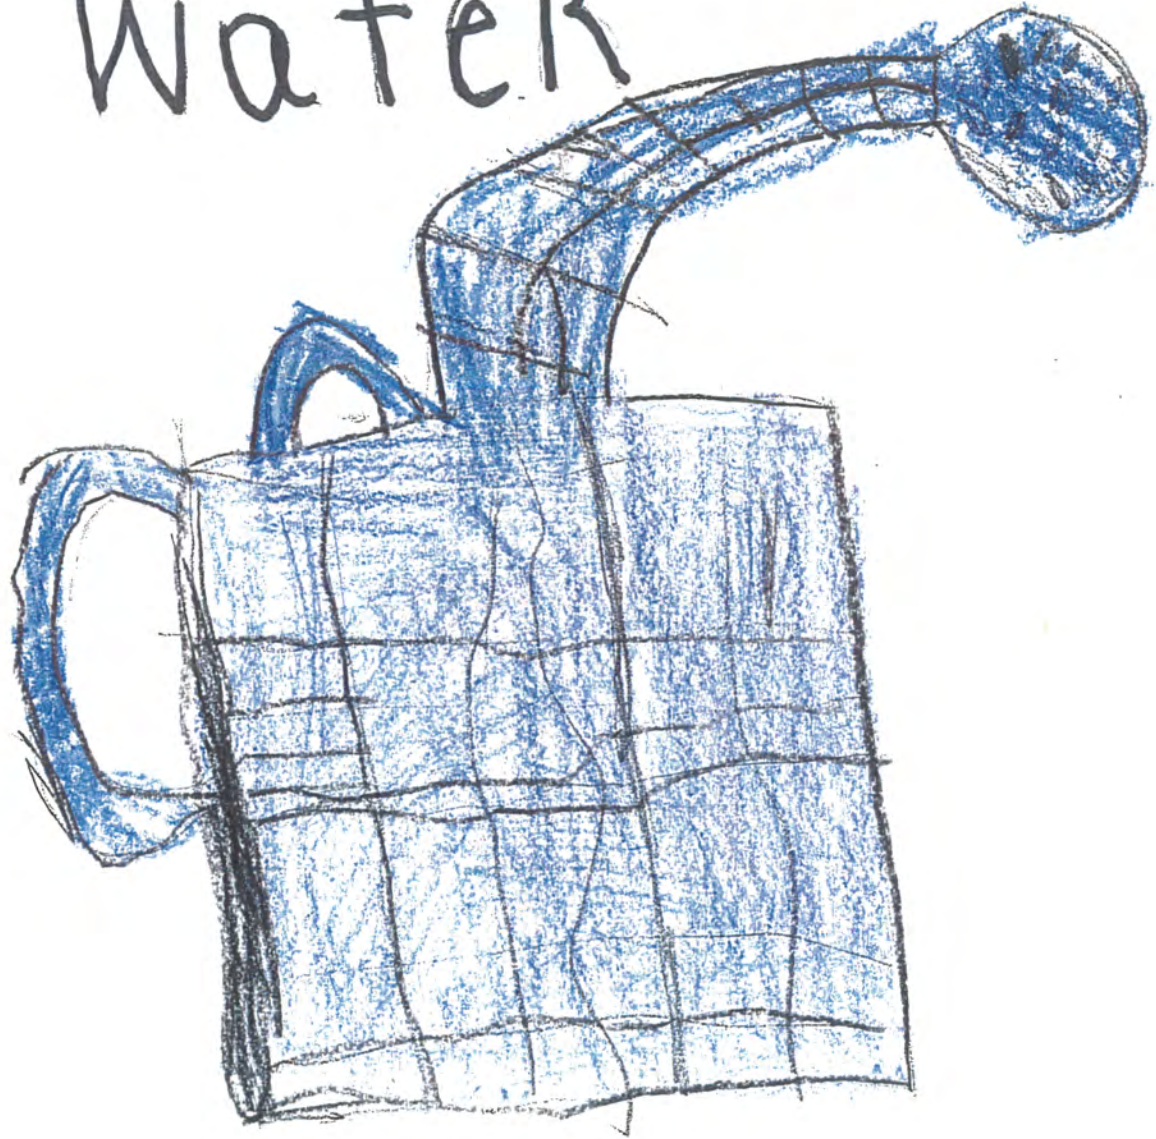

Charlie

11

carte

Give JUST enough
Water

because PLants

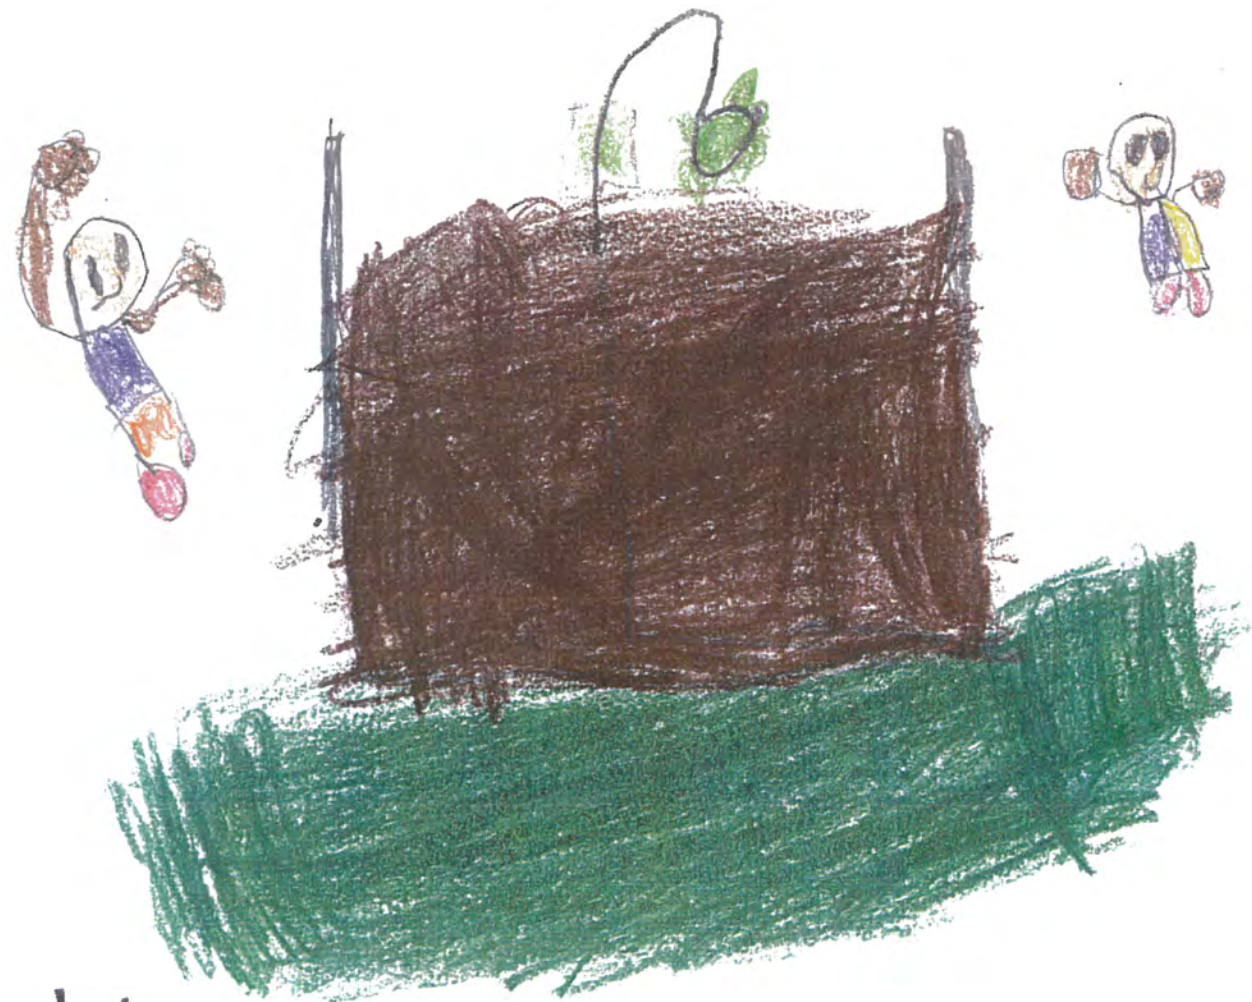

need it to GROW.

If plants don't get
enough water

they will wilt.

If plants get too much water

they will rot.

pull weeds

because weeds crowd plants.

Protect Your Garden from

aphids

because they hurt the plants.

Protect from slugs

because they hurt plants.

Garden Helpers

Worms are good

because they make
rich soil.

Lady bugs are Good

because they protect
plants by eating aphids.

Praying mantis are good

Because they eat

pests.

Bees are good

because they help
pollinate.

When ripe

Harvest and
Enjoy!
